EDUCATION

VIT Bhopal University

CGPA: 8.64

B.Tech, Computer Science and Engineering (Cloud Computing and Automation)

Aug 2023 – May 2027

St. Joseph's Convent Hr. Sec. School, Itarsi

Class XII: 72.8% | Class X: 87.6%

CBSE

2021 – 2023

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL

Core Computer Science: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Databases: PostgreSQL, MySQL

Cloud & DevOps: AWS, Cloud Computing, Linux, Git, GitHub

Automation & Scripting: Python Scripting, Shell Scripting, Task Automation

PROJECTS

Cleerlyst | *Scalable Application and Data Management Platform* | *Java, TypeScript, PostgreSQL* [GitHub](#) | 2025 – Present

- Engineered a scalable academic data platform with role-based access workflows, enabling controlled data retrieval for students and staff across different authorization levels.
- Designed the PostgreSQL data architecture and optimized high-frequency database operations with targeted indexing to improve query performance as record volume increases.
- Implemented an audit logging mechanism to track user, resource, and timestamp information for data access, strengthening system security, traceability, and operational reliability.

GapstractAI | *Literature Gap-Finder* | *live, 800+ users* | *TypeScript, PostgreSQL, LLM APIs* [GitHub](#) | Sep 2025

- Engineered an end-to-end document processing platform integrating external AI services through APIs to transform unstructured research papers into structured analytical outputs.
- Designed the application data layer and processing workflow for document ingestion, API-based analysis, data persistence, and retrieval.
- Built a labelled eval set of 40 abstracts to score prompt changes; gap-flag precision rose from **62% to 81%**.

ChokeHelm | *Automated Systems and Reliability Engineering Platform* | *Python, NumPy, SciPy* [GitHub](#) | Jul 2026

- Developed an automated Python-based control system for making hourly operational decisions while continuously enforcing hard resource and pressure constraints.
- Engineered randomized stress-testing workflows across 120 operating scenarios to evaluate system behaviour, constraint handling, and reliability under uncertain conditions.
- Benchmarked the system against a rate-PID baseline, maintaining all defined operational constraints while the baseline violated them in 120/120 scenarios.

EXTRACURRICULAR

- * 2× college-level hackathon winner(PyDroidX VibeHack and Secvit), building and shipping working solutions under time pressure.
- * 1st Place in a quiz competition by Notion
- * Technical Content team member, IoT Club, VIT Bhopal.
- * Assisted in planning and coordinating college events with the Ekfraseis Dramatics Society, collaborating with team members to ensure smooth execution.
- * Volunteered with orphaned children for a month, teaching basic subjects, organizing activities, and spending evenings mentoring and engaging with them.
