EDUCATION

VIT Bhopal University

Bachelor of Technology (B.Tech), Computer Science and Engineering (Cloud Computing)

CGPA: 8.71

Aug 2023 – Present

St. Joseph's Convent Hr. Sec. School, Itarsi

CBSE

Class X: 88% | Class XII: 73%

Relevant Coursework: Machine Learning, Linear Algebra, Probability & Statistics, Data Structures & Algorithms, DBMS, Operating Systems, Object-Oriented Programming

TECHNICAL SKILLS

Languages: Python (primary), Java, JavaScript/TypeScript, SQL

Machine Learning & Data: NumPy, Pandas, scikit-learn, Matplotlib, feature engineering, model evaluation

Web: React.js, Next.js, Node.js, Express.js, REST APIs, PostgreSQL

Cloud & Tools: AWS (S3, Fundamentals), Git, GitHub, Docker

PROJECTS

SolarMatch: Surplus Solar Forecasting | *Python, scikit-learn, Pandas, NumPy, REST API*

- Built a regression model that forecasts a household's next-day surplus rooftop-solar generation, aimed at helping India Energy Stack style peer-to-peer platforms list tradeable surplus power ahead of time.
- Engineered weather, time-of-day, and rolling-load features on roughly 2 years of hourly solar and consumption data, and used time-series cross-validation so the model was not evaluated on future data.
- Reached an RMSE of around 0.41 kWh, improving on a naive last-day baseline, and used feature importance to find that irradiance and hour-of-day mattered most.
- Served the predictions through a small REST API so a client could request the forecast for a given household.

GapstractAI | *React.js, TypeScript, Node.js, PostgreSQL, OpenAI API, AWS S3*

- Built an AI-assisted research tool that processes uploaded papers and helps surface under-explored areas across a set of documents.
- Designed REST APIs with role-based authentication and PostgreSQL-backed storage, and handled file uploads through AWS S3.
- Used the OpenAI API to pull out themes from papers and turn them into short, structured summaries for the user.

Cleerlyst | *Next.js, TypeScript, PostgreSQL, NextAuth, Google OAuth*

- Built a privacy-focused platform for accessing academic data behind secure login, with sign-in handled through NextAuth and Google OAuth.
- Added access control and simple audit logging so that data requests could be traced back to a specific user.
- Worked across the full stack to keep the app usable while still being careful about who could see what.

CERTIFICATIONS

- Google IT Support Professional Certificate, Google Career Certificates
- AWS Technical Essentials, Amazon Web Services
- MERN Full Stack Certification Program, Codemithra (Ethnus)

EXTRACURRICULAR

- 2× college-level hackathon winner, building and shipping working solutions under time pressure.
- Selected for the internal round of Smart India Hackathon (SIH) 2024.
- Technical Content Lead, IoT Club, VIT Bhopal.
- Helped plan and run college events with the Ekfraseis Dramatics Society, coordinating across teams and handling logistics.
